PROFESSIONAL SUMMARY

Global Reliability Process & Systems Engineer with over 4 years of experience in electrical maintenance, automation, and digital transformation. Worked at Petrobras (POÇOS RJ) as one of the engineers responsible for initiating the digital transformation of maintenance, bringing Industry 4.0 concepts to the new management. Currently, I support SBM Offshore's global reliability team in Santos, providing support in reliability concepts, maintenance processes, and corporate systems, in addition to developing digital tools that reduce manual work and increase operational efficiency.

EDUCATION

Bachelor of Software Engineering | Anhanguera | 2022 - 2025
Electrical Technician | SENAI MG | 2015 - 2017
Electrical Control Panels | SENAI MG | 2016 - 2018
Course in Oil and Gas | Petrorio RJ | 2015

PROFESSIONAL EXPERIENCE

Reliability Process & Systems Engineer
Atlas Professionals | Janeiro 2026 - Atual | Alocado na **SBM Offshore**
Working on global Reliability Engineering, Asset Management, Maintenance Data Quality, and Process Improvement initiatives, supporting maintenance and reliability teams through the validation, standardization, and optimization of offshore asset data. Responsible for developing digital tools and solutions for process automation, improving maintenance data quality, supporting FCA projects, and increasing the operational efficiency of Reliability and Maintenance Engineering teams.

Key Responsibilities

- Support for Facilities Change Application (FCA) projects, ensuring quality, consistency, and compliance of data loaded into the IFS system.
- Validation and quality control of maintenance data, equipment, preventive plans, and asset information in a CMMS environment (IFS).
- Development of digital tools for automating Reliability and Maintenance Engineering processes, reducing manual effort and increasing the traceability of analyses.
- Development and maintenance of support tools for the Performance Standards review process, contributing to the standardization of analyses and improvement of operational efficiency.
- Development of Quality Check processes for data validation and reconciliation between load files, IFS, EMS, and corporate references.
- Support for global teams in the analysis of processes, systems, and data related to reliability, maintenance, and offshore asset management.
- Development of automation and analysis solutions using Excel, Power Query, Power BI, JavaScript, HTML, and Python, supporting continuous improvement and digital transformation initiatives.

Key Responsibilities

• Development of a tool to support the Performance Standards review and validation process, increasing the consistency and traceability of analyses.

• Development of a solution for FCA Load Quality Check, allowing the validation and reconciliation of data loaded in IFS with load files and reference bases.

• Creation of solutions for validating PM Actions, maintenance frequencies, and data compliance across different corporate sources.

Mid-level BPO Analyst (Petrobras POÇOS)

Tata Consultancy Service | March 2022 - November 2024 | Remote - Client: **Petrobras**

Participation in Petrobras strategic digital transformation projects with a focus on Business Intelligence, data analysis, RPA process automation, and the development of digital solutions using Scrum methodology. Responsible for creating integrated solutions with Power Apps, Power BI, Python, and automations for optimizing operational processes and supporting decision-making.

Key Achievements

• Development of more than 15 dashboards in Power BI, reducing managerial analysis time.

• Creation of web systems with artificial intelligence integration for process automation.

• Development of Python and Streamlit solutions for automating manual routines.

• Implementation of Power Apps solutions to increase operational productivity.

• Participation in migration and organization of SharePoint environments to support users and business teams.

Mechatronics Planner

Tecnovolt Engenharia | November 2021 - February 2022 | Macaé, RJ - Client: **Petrobras UN-BC**

Working in support of offshore maintenance, industrial automation, and operational data analysis, with activities related to fire and gas systems, infrastructure, SAP PM, Excel, Power BI, and asset monitoring on oil platforms.

Key Responsibilities

• Programming and support in Ladder logic for industrial automation.

• Support for maintenance management using SAP PM and operational data analysis.

• Infrastructure and systems monitoring using ZABBIX.

• Development of controls and operational analyses in Excel, Power BI, and SQL.

• Support in activities for embarking and disembarking microcomputers and monitoring stations on oil platforms.

• Support for the maintenance of fire and gas systems and sensor control on decommissioned platforms.

• Continuous support for offshore maintenance teams, analyzing logic, databases, and equipment availability for embarkation and disembarkation.

TECHNICAL SKILLS

Reliability, Asset Management, and Maintenance

Reliability Engineering, Asset Management, Maintenance Data Quality, Performance Standards, Facilities Change Application (FCA), PM Actions, CMMS, IFS, SAP PM, Process Improvement, and Data Validation.

Systems, Data, and Automation

Advanced Excel, Power Query, Power BI, Python, Pandas, NumPy, DuckDB, SQL, Oracle, ETL, Apache Airflow, Docker, KNIME, and Web Scraping.

Development and Digital Solutions

JavaScript, HTML, CSS, Power Apps, SharePoint, Streamlit, development of internal tools, process automation, and digital solutions for continuous improvement.

Methodologies and Processes

Scrum, Agile, requirements analysis, continuous improvement, data governance, process documentation, and support for multidisciplinary teams.

Languages

English: Intermediate level, able to communicate effectively in technical and professional environments.
